E-commerce Delivery and Customer Reviews

Olist Brazilian E-commerce dataset (95,824 delivered orders with a review) | Prepared by Linet Toppo

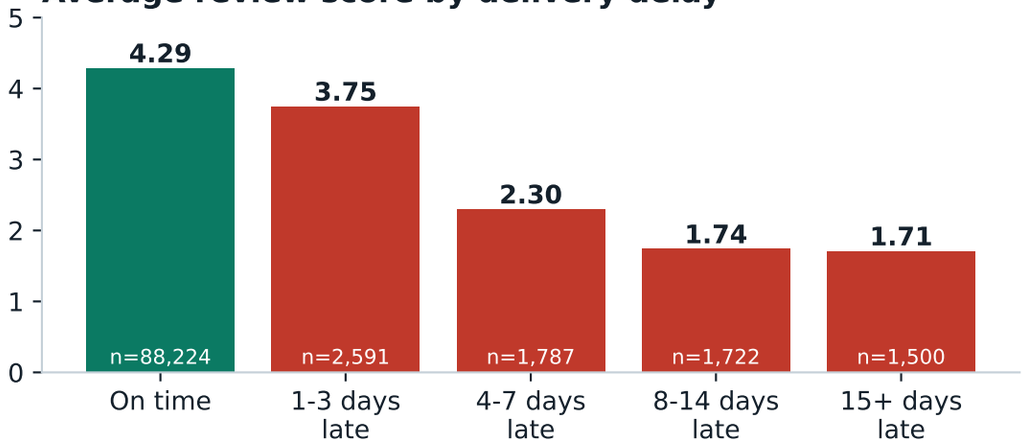
Delivered orders analysed
95,824

Delivered late
8.0%

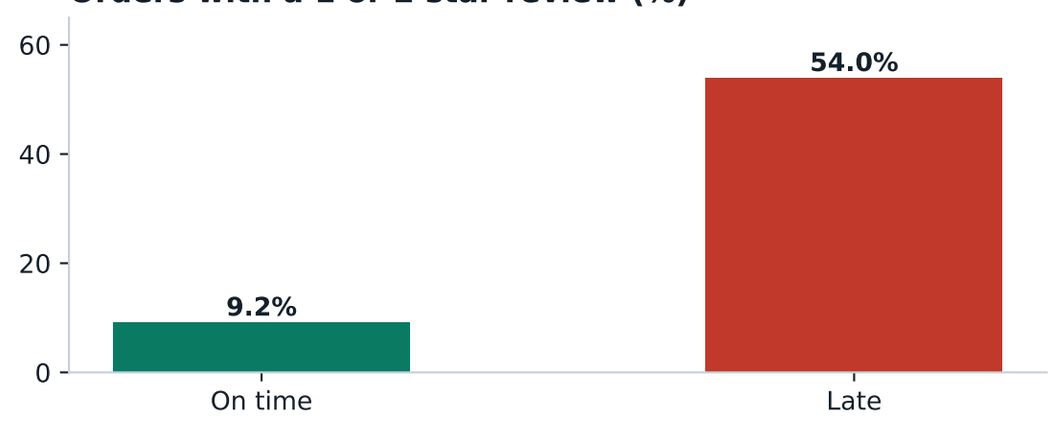
Avg review: on time
4.29 / 5

Avg review: late
2.57 / 5

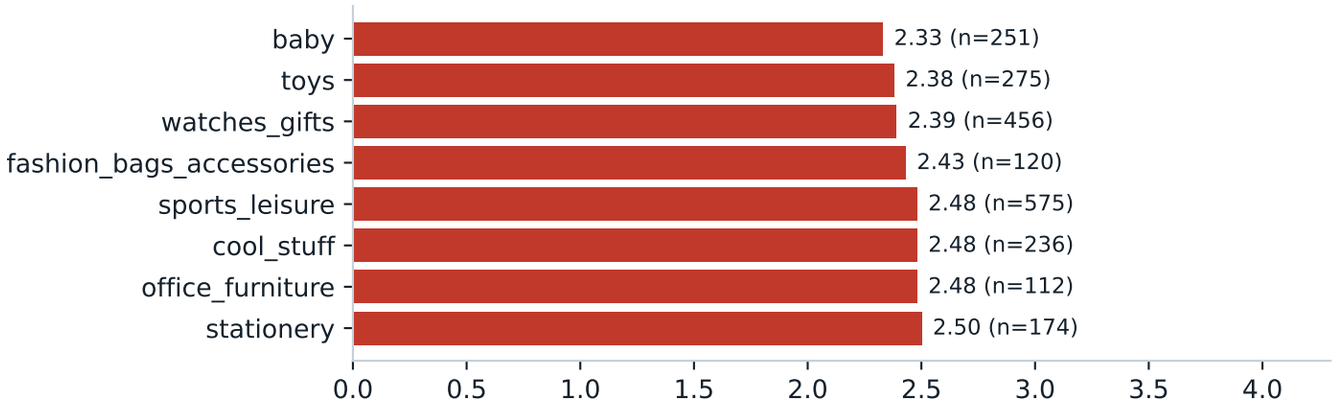
Average review score by delivery delay



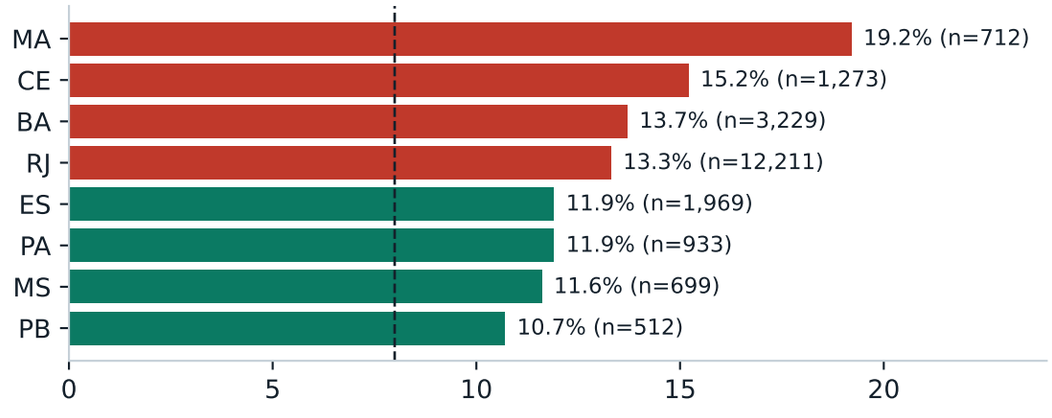
Orders with a 1 or 2 star review (%)



Avg review of late orders, 8 lowest categories (on-time avg: 4.29)



States with the highest share of late orders (%)



Key findings (dashed line = overall late rate; red states = 1.5x that rate or more)

1. Late delivery cuts the average review from 4.29 to 2.57. 54% of late orders got a 1 or 2 star review, against 9% of on-time orders.

2. The longer the delay, the worse the score: 3.75 for 1-3 days late, 2.30 for 4-7 days, and about 1.7 for 8+ days.

3. Only 8.0% of orders were late, but it is uneven: MA (19.2%) and CE (15.2%) are far above average. Late orders score low in every category (about 2.3 to 2.5).
